# NiceZyme View of ENZYME: EC 5.5.1.4

## Official Name

**Inositol-3-phosphate synthase.**

## Alternative Name(s)

**D-glucose 6-phosphate cycloaldolase.**

**Glucocycloaldolase.**

**Glucose 6-phosphate cyclase.**

**Inositol 1-phosphate synthetase.**

**Myo-inositol-1-phosphate synthase.**

## Reaction catalysed

D-glucose 6-phosphate <=> 1D-myo-inositol 3-phosphate

## Cofactor(s)

NAD.

## Comment(s)

The NAD(+) dehydrogenates the -CHOH- group to -CO- at C-5 of the glucose 6-phosphate, making C-6 into an active methylene, able to condense with the -CHO at C-1; finally, the enzyme-bound NADH reconverts C-5 into the -CHOH- form.
